PROFESSIONAL SUMMARY

Machine Learning Engineer with hands-on experience across the full ML lifecycle — data preprocessing, feature engineering, model training, and deployment — using Python, PyTorch, and Scikit-learn. Contributed to Ayushman Cowfit Pro, a live production application on the Google Play Store. Built and deployed end-to-end projects including a computer vision-based crop disease detection system (85% accuracy on 10,000+ images) and a customer churn prediction model, both shipped as interactive Streamlit applications. CGPA 9.2/10 in Computer Science.

EXPERIENCE

Machine Learning Engineer Intern — A3 Services, Pune

Aug 2025 – Jul 2026

- Contributed to the ML components of Ayushman Cowfit Pro, a production application live on the Google Play Store, supporting features used by real end users.
- Built data preprocessing and feature engineering pipelines in Python and Pandas, improving dataset reliability for downstream models across multiple internal projects.
- Trained and evaluated machine learning models against project requirements, applying evaluation metrics (accuracy, precision/recall, F1) to guide model selection and iteration.
- Worked with cross-functional stakeholders to translate business requirements into data-driven ML solutions, owning the pipeline from raw data to evaluated model.
- Executed the end-to-end ML lifecycle — data preparation, exploratory analysis, feature engineering, model development, and evaluation — across multiple internal projects.

PROJECTS

Sugarcane Disease Detection System — github.com/parshav42/Sugarcane-Disease-Detection-System

- Built a computer vision image classification system in PyTorch and Scikit-learn to detect sugarcane leaf diseases, training on 10,000+ labeled leaf images and achieving ~85% classification accuracy.
- Designed a recommendation engine that converts model predictions into actionable guidance for farmers, extending the system beyond classification into decision support.
- Built an integrated crop recommendation feature based on input conditions, and deployed the full system on Render with an HTML, CSS, and JavaScript front end for non-technical, farmer-facing use.

Customer Churn Prediction System — github.com/parshav42/customer-churn-predictor

- Built a Scikit-learn classification model to predict customer churn risk, trained and evaluated on 2,000+ customer records with preprocessing and feature engineering to improve prediction performance.
- Deployed the trained model as an interactive Streamlit web application for real-time churn prediction, supporting proactive customer retention decisions.

SKILLS

Programming: Python, C++, C

Machine Learning & Deep Learning: PyTorch, Scikit-learn, CNNs, Transfer Learning

Computer Vision: Ultralytics (YOLO-based object detection)

Data & Analytics: NumPy, Pandas, Matplotlib, Seaborn

Deployment & MLOps: FastAPI, Docker, Streamlit, Git

Cloud & Dev Tools: AWS, Linux, GitHub, Google Colab, Jupyter Notebook

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science

2022 – 2026

D. Y. Patil Agriculture and Technical University, Talsande | CGPA: 9.2 / 10

- Solid foundation in Computer Science, Machine Learning, and Artificial Intelligence, developed through hands-on project work and applied coursework.

CERTIFICATIONS

- OpenCV Bootcamp — OpenCV University (May 2026) — Covered OpenCV fundamentals, image processing, object detection, video analysis, and real-time vision systems.
- Artificial Intelligence Program — SmartInternz — Industry-oriented program covering AI fundamentals and real-world applications.
- Applied Data Science Program — SmartInternz — Hands-on data preprocessing, exploratory analysis, visualization, and predictive modeling in Python.

ADDITIONAL ACHIEVEMENTS

- Built and experimented with 30+ personal machine learning models spanning classification, regression, and computer vision tasks.
- Led a team for a college project, coordinating design, implementation, and delivery from concept to completion.
